

Manlift Ticket Regina

Manlift Ticket Regina - The Manlifts and Elevated Platforms program offers training on the regulations, rules and proper application of safe operating measures and work practices involved in daily activities for people who work with this machinery. The course has been designed for people who are actively involved in these activities or individuals who have a basic understanding of this machine.

During the last couple of decades, manlifts and aerial platforms have become a common sight on construction job sites and in industrial maintenance applications. These machinery provide an easy way to lift staff close to what must be performed on a stable platform apparatus, allowing staff to carry out tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

Like every other tool, manlifts are just safe if they are used properly. Because they elevate staff above floor or ground level, accidents could easily happen and this can lead to serious fatalities or injuries for both the manlift operators as well as any passerby who may not be lucky enough to be standing below.

Manlifts come in various types. Nearly all fit into 1 or 2 categories: the scissor lift, that is capable of moving upward and downward and the articulating boom lift, which can move both horizontally and vertically.
